

- 1 Overview
- 2 Introduction
- 3 **Option 1: Run Docker on your local machine**
- 4 Option 2: Run Docker on GCE
- 5 Verify Datalab

## Launch Cloud Datalab

In a terminal window, git clone the training-data-analyst repository:

```
git clone https://github.com/GoogleCloudPlatform/training-data-analyst
```

This downloads the code from github.

### Start Datalab Docker container

To start Datalab Docker container, open up a Terminal window and type in:

```
cd training-data-analyst/datalab  
./start_datalab.sh
```

This may take a few minutes if the Docker image needs to be downloaded.

### Connect to Datalab

To connect to Datalab and sign into GCP:

#### Step 1

In your browser's address window, type `http://localhost:8081/`.

#### Step 2

In the bottom-left corner of the browser window, click on the right-most icon of the ribbon to make sure that you are signed into GCP:
