Setup rentals data in Cloud SQL

9. Explore Cloud SQL

To explore Cloud SQL, you can use the tool `mysql` from Cloud Shell:

Step 1

In the Cloud Shell window, type:

```
mysql --host=<MySQLIP> --user=root --password
```

(You noted down the MySQL IP address in Step 5: **Create Cloud SQL instance**) and type in the root password you assigned to your Cloud SQL instance.

Step 2

In the Cloud Shell, at the `mysql` prompt, type:

```
use recommendation_spark;
```

This sets the database in the `mysql` session.

Step 3

Let's find out if there is a great deal out there somewhere:

```
select * from Accommodation where type = 'castle' and price < 1500;
```

Did you find a mistake? [Please file a bug.](#)
