

- 1 Overview
- 2 Introduction
- 3 **Ingest USGS data**
- 4 Transform the data
- 5 Create bucket
- 6 Store data
- 7 Publish Cloud Storage files to web
- 8 Clean up

## Interact with Cloud Storage

### Step 4

Examine the ingest code using `less` :

```
less ingest.sh
```

The `less` command allows you to view the file (Press the `spacebar` to scroll down; the letter `b` to **back** up a page; the letter `q` to **quit**).

The program `ingest.sh` downloads a dataset of earthquakes in the past 7 days from the US Geological Survey. Where is this file downloaded? To disk or to Cloud Storage? \_\_\_\_\_

### Step 5

Run the ingest code:

```
bash ingest.sh
```

### Step 6

Verify that some data has been downloaded:

```
head earthquakes.csv
```

The `head` command shows you the first few lines of the file.
