Setup rentals data in Cloud SQL

5. Create Cloud SQL instance

To create Cloud SQL instance:

Step 1

From the GCP console main menu (horizontal bars), select **SQL** (in the Storage section).

Step 2

Click on **Create Instance** [*Note*: If you do not see Create Instance button, please open a new browser tab and navigate to **SQL** and you should see the blue button to **Create Instance**]

Step 3

Choose Cloud SQL **Second Generation**

Step 4

Give the instance the ID **rentals**

Instance ID
ID is permanent. Use lowe

Step 5
